## Unit 7 polygons and quadrilaterals homework 3 answer key

Unit 7 polygons and quadrilaterals homework 3 parallelograms proofs answer key. Unit 7 polygons and quadrilaterals homework 3 rectangles answer key geometry. Unit 7 polygons and quadrilaterals homework 3 rectangles answer key. Unit 7 polygons and quadrilaterals homework 3 parallelograms answer key.

In the attached image you can find the task of the unit 7. We find the missing measures of each figure.1. Note that the first figure is a rectangle, which means that the opposite sides are congruent then,  $VY = 19WX = 31VW = 31$  To find the diagonals we must use the Pythagoras theorem, where the diagonals are also hypothetical, because the rectangles have congruent diagonals, which intersect equally. It means, 2. The number two figure is also a rectangle. If  $gh = 14$  means  $ge = 28$ , because the diagonals intersect in equal parts. Now,  $gf = 11$ , because the rectangles have sides opposite congruent $df = 28$ , because in a  $hf = 14$ , because the Its diagonal half. To find the side  $DG$ , we must use the Pythagoras theorem, where  $GE$  is hypotenuse3.This figure is also a rectangle, which means that all four internal angles are straight, ie equal to  $90.â$   $^\circ$ , which means that the angle  $11$  and the  $59th$  are complete. Now, the corners  $11$  and  $4$  are alternating internal angles that are congruent, because a rectangle has congruent and parallel opposite sides. The which means, because it is the complement of the angle  $4.Oca$ , because it is a Base angle of a isosceles triangle. Remember that in a rectangle, the diagonals are congruent, and intersect equally, which creates isosceles triangles., For theorem of the internal corners., For theorem of vertical angles., For theorem of vertical angles., For complementary corners., For Alternate interior corners., for complementary corners. Internal corners of a rectangle, which by definition are equal to  $90^\circ$ ., for alternating internal corners and by data., for complementary angles., For complementary corners., For theorem of internal corners., For additional angles.5. , for additional corners., For theorem of internal corners, and for theorem of the isosceles triangle., by definition of rectangle., from theorem of the internal corners, and for theorem of the isosceles triangle., For complementary corners., For alternate internal corners., For alternate internal corners. 6. The figure is a rectangle, which means that its opposite sides are the same, so we replace this value in the expression of the w $zquindi$  side, the  $wz$  side is  $29$  units .7. We hope the diagonals of a rectangle. They are congruent, therefore, therefore, the front side is  $73$  units in length.
