Refer to the graphic:

Host A is communicating with the server.

What will be the source MAC address of the frames received by Host A from the server?

- A. the MAC address of router interface e0
- B. the MAC address of router interface e1
- C. the MAC address of the server network interface
- D. the MAC address of host A

CISCO ROUTE 300-101 CERTIFICATION EXAM SAMPLE QUESTIONS AND ANSWERS

300-101 Practice Test

NWEXAM.COM

Cisco Certifications help you launch and advance your IT Networking career. This Cisco CCNP Routing and Switching 300-101 PDF gives you the opportunity to identify any knowledge gaps so you can refine your study strategy and ensure a good score in 300-101 exam.

CCNA 200-125 Exam: Switching Questions With Answers

Question 1

Which switching method duplicates the first six bytes of a frame before making a switching decision?

- A. fragment-free switching
- B. cut-through switching
- C. store-and-forward switching
- D. ASIC switching

Answer: B

<http://www.configrouter.com/ccna-exam-switching-questions-with-answers-699/>

Question 2

Refer to the exhibit. Which of these statements correctly describes the state of the switch once the boot process has been completed?

- A. As FastEthernet0/12 will be the last to come up, it will not be blocked by STP.
- B. Remote access management of this switch will not be possible without configuration change.
- C. More VLANs will need to be created for this switch.
- D. The switch will need a different IOS code in order to support VLANs and STP.

Answer: B

[CCNA 200-125 Dump With Questions and Answers with Explanation](#)

2017 Latest Cisco 200-355 Dumps Exam Practice Questions And Answers Online Free Download

http://www.lead4pass.com/200-

100% Money Back Guarantee

Vendor: Cisco
Exam Code: 200-355
Exam Name: Implementing Cisco Network Security
Version: Demo

Question No : 1

What role is responsible for moving a part to the authorized state?

- A. Applicant

Exhibit: Network diagram showing four switches (S1, S2, S3, S4) with their MAC addresses and IP addresses. Below the diagram are multiple-choice options for the root bridge election.

Ccna certification exam questions and answers pdf. Ccna certification exam questions and answers 2020. Ccna routing and switching certification exam questions and answers pdf. Ccna global certification exam questions and answers.

These Cisco Certified Network Associate (CCNA) sample questions and demo exam help you in removing these doubts and prepare you to take the test. Identify the routing protocol that maintains a topological database of the network? A. a) 6 b) 8 c) 30 d) 62 e) 126 07. InterfaceThe interface parameter tell a packet which interface to use to reach other networks... 40. Data transmission in both directions but only one way at a timeC. Hope these ccna practice test questions will help you to brush up your concepts and help you for the last minute quick preparation. We have prepared these Cisco Certified Networking Associate certification exam dumps from a wide range of sources for reviewing from old to the updated questions. To manage routing overheadD. The VLAN ID can be obtained from the MAC address source and the MAC address table.B. Stranger unicast frames get transmitted to the ports belonging to the VLANs.C. Retransmission of broadcast and multicast frames configured on different VLANsD. When the Layer 3 addresses and control information is added to the network layer, packets are created.E. The bits get translated to voltages by presentation layer presentation layer across the physical link.The transport layer is fragmented into segments and adds dependability and data flow. MP-BGPd. APIC-EMAn enterprise can have a connection to an Intercloud Exchange provider, which has connections to multiple cloud providers. ICMPb. OSPF c. It requires a workstation to be attached to a switch, the NIC must support it, and collision detection and loop back must be disabled. Other traffic types can be placed into non-priority queues, which can be given minimum bandwidth guarantees. Shortest path firstC. WREDd. WFQLow Latency Queuing (LLQ) allows you to place one or more types of priority traffic into a priority queue. It uses NCCP. TransportThe routing occurs within the DoD TCP/IP reference model on the internet. 27. Unspecified addressAnycast is a single destination address which has multiple routing paths. speedB. SDLCC. MaskB. What parameter is used with statistically assigned routers to tell packets which interface to use to reach a distant network?A. The default Hello timer value is 3 seconds. Point-to-Point Protocol is a Data Link Layer (i.e. Layer 2) protocol.Transmission Control Protocol (TCP) and User Datagram Protocol (UDP) are both Transport Layer (i.e. Layer 4) protocols. When an interface is configured with Port Fast BPDU guard, how does the interface respond when it receives a BPDU?A. 120The default administrative distance of OSPF had default administrative distance of 110. 32. SLIP can just transport TCP/IPD. This layer decides how to transmit the raw bits over physical data links. 33. SmartNetb. Which function of the IP SLAs ICMP jitter operation can you use to determine whether a VoIP issue is caused by excessive end-to-end time?A. c) An ARP inspection has failed. successive packet lossD. AnycastC. Explain how two ethernet interfaces connect to four VLAN with few physical interfaces and without a reduction in the network performance?A. Collapsed CoreCisco StackWise allows you to interconnect multiple Cisco Catalyst switches (that have Stackwise support) using special interconnect cables. 3 secondsC. SubnetC. We will support you by compiling CCNA exam question and answers which you can practice before giving your Cisco CCNA Exam. of broadcast domains will remain the same. 21. The multiplexing can be done up to 256 channels on a single fibre and supports both SDH and SONET standards. The routing is made possible on the switch itself. A separate router is not required between each VLAN. 13. This happened at data link on the OSI layer. 26. sessionB. SessionE. Therefore, TCP is considered to be a reliable, connection-oriented protocol, while UDP is considered to be an unreliable, connectionless protocol. 6. Data linkIn the seven-layer OSI, the physical layer is the first and the lowest layer. What is known as "one-to-nearest" addressing in IPv6?A. Distribution and Core C. This protocol ensures error-free transmission. exam format, we suggest you practice with Premium Cisco 200-301 Certification Practice Exam. B. CFA Institute does not endorse, promote or warrant the accuracy or quality of ITEXams. The OSI model in RSTP used to prevent loops at which layer?A. Default gatewayD. The ApplicationB.The InternetC. Which of the following is considered to be an unreliable Transport Layer protocol?A. ApplicationThe application layer is responsible for determining the availability of receiving the program. 25. The CCNA exam needs not only training also a comprehensive exam preparation. DWDM supports both the SDH and SONET standardsE. PPP uses network control programs (NCCP) component to encapsulate multiple protocolsB. The PresentationC. The SessionD. crossedD. Within the DoD TCP/IP reference model, Where does routing occur?A. Up to 1Gbps signal is carried by each channel. 16. Cisco 200-301 (CCNA) Sample Questions: 01. CloudFrontb. It provides encrypted multiprotocol support.C. Device-administration packets are encrypted in their entirety.D. It ensures that user activity is entirely anonymous.The RADIUS (Remote authentication dial-in user service) provides security against unauthorised access. What type of queuing adds a priority queue to CB-WFQ?A. Packet lossB. If a notice-level message is sent to a syslog server, which event has occurred? a) 224.0.0.5 b) 224.0.0.9 c) 224.0.0.10 d) 224.0.0.1 06. BinaryD. Connect the four VLANs with a swift Ethernet interface by using a hub on the router.B. Handle VLAN traffic with the second router.C. An Addition of two more Fast Ethernet interfaces.D. Implement a router-on-a-stick configuration.The two fast Ethernet interfaces can be connected to four VLANs by implementing a router-on-a-stick configuration. 24. Global unicastB. DWDM can multiplex up to 256 channels on a single fibre D. duplexE. The DTP negotiation settings can be different in ports within the Ether Channel. 28. DTP negotiation settingsC. PresentationD. Determine the layer in the OSI reference model responsible for checking the availability of the receiving program if enough data is available to be sent. 12. Round trip latency is the time required for the data to travel from one end to the other end of the network. 14. What are the two options which are justified to use an IPv4 private IP space?A. This allows the enterprise to switch to a different cloud provider while keeping their existing connection to the Intercloud Exchange. 2. Determine the network portion of Internet protocolD. The IP address of the host part is hidden.The purpose of wildcard mask is to match a particular portion of the IP address while ignoring the rest. 37. Which is true regarding DHCP snooping?A. To enable intra-enterprise communication B. MulticastD. What kind of devices are replaced by the use of subinterfaces or VLAN routing?A. Traffic routing for VLANsD. You can then administer the stack of switches as one logical unit. 3. What id of the cable is used to connect two devices with MDI interfaces?A. Layer 2 bridgeB. What type of address is this? Match a particular portion of the IP address while ignoring the rest of the address.B. Determine the class of IP addressC. What network are architecture layers combined in a collapsed core design?A. In this blog, you have the best 30 CCNA practice test questions with which you can study and pass exams faster. Router (config) # service password-encryptionD. The VLAN operation on switches, is correct in which statement?A. 1-secondB. physicalThe frame is damaged and discarded on data link OSI layer. Mention the steps in the OSI data encapsulation process?A. Data transmission in only one directionFull duplex, capability for simultaneous data transmission between a sending station and receiving station. How large is the typical network portion of an IPv6 global unicast address? Two-Tier design, where the two tiers are the Access Layer and the Collapsed Core layer. Which three statements about DWDM are true? A. Router# service password-encryptionB. ECNc. LLQ c. physicalThe computed checksum on a frame which is damaged. a) Link local b) Multicast c) Anycast d) Global unicast 04. You have an interface on a router with the IP address of 192.168.192.10/29. Layer 3 switchD. Intercloud Exchangec. What Cisco technology allows you to interconnect multiple physical switches into a single logical switch?A. PPP can only transport TCP/IPc. Connect with us Facebook Twitter Youtube ITEXams doesn't offer Real Microsoft Exam Questions. 1 Gbps signals.F. DWDM supports simplex communications over multiple strands of fibreThe Dense wavelength division multiplexing is a fibre optic transmission technique. You run ipconfig on your Windows system and see an IPv6 address that starts FE80. Acts as the root bridge for the configured VLAN.D. An errdisable state is experiencedThe interface goes into an errdisable state when it receives a BPDU state. PhysicalB. Router (config) # password-encryptionC. Which of the following are dynamic routing protocols? A frame was found damaged and discarded when a receiving host computes the checksum. 90B. Which functionality does an SVI provide?A. The DSCP field constitutes how many fields in the IP header? What are the two results that would occur if the hub is replaced with a switch that is configured with one Ethernet VLAN?A. It uses a crossover cable. 19. Name the highest layer of the protocol stack that the network administrator while verifying a new host?A. An ApplicationB. TCPd. ICMPe. PPPIP (Internet Protocol) and ICMP (Internet Control Message Protocol) are Network Layer (i.e. Layer 3) protocols. 10 secondsBy default, Hot Standby Router Protocol (HSRP) has a default Holdtime timer value of 10 seconds. Link stateD. Which condition does the err-disabled status indicate on an Ethernet interface?A. rolledB. What is the Cisco name for encapsulation type used on a serial interface?A. Traffic gets blocked from DHCP servers on untrusted interfaces. RIPvC. Note that the priority queue used by LLQ is policed (i.e. has a bandwidth limit). 4. The practice test is one of the most important elements of your Implementing and Administering Cisco Solutions (CCNA) exam study strategy to discover your strengths and weaknesses, to improve your time management skills and to get an idea of the score you can expect. a) A network device has restarted. a) 1 b) 0 c) 5 d) 6 Solutions: Question: 01 Answer: c Question: 02 Answer: d Question: 03 Answer: a Question: 04 Answer: c Question: 05 Answer: a Question: 06 Answer: a Question: 07 Answer: c Question: 08 Answer: b Question: 09 Answer: a Question: 10 Answer: c Note: If you find any error in these Implementing and Administering Cisco Solutions (CCNA) sample questions, you can update us by write an email on feedback@nwexam.com. A single strand of fibre supports Bi-Directional communication.B. DWDM is helpful in submarine long-distance cable-systemsC. If a switch has five workstations attached, how many collision domains are created? The VLAN operation spans across ports which configure in access modes.Th VLAN operation on switches is possible when retransmission of unicast frames is done to the same VLAN. 30. SNMPd. ARPe. EIGRPOSPF (Open Shortest Path First) is a distance-vector dynamic routing protocol that uses the Dijkstra Shortest Path First Algorithm to determine the best path to a remote network. Enhanced Interior Gateway Routing Protocol is an advanced distance-vector dynamic routing protocol that uses the Diffusing Update Algorithm to determine the best path to a remote network. 7. This consolidated Collapsed Core layer combines the functions of the traditional Distribution and Core layers. 5. On which default interface have you configured an IP address for a switch? a) 32 bits b) 48 bits c) 64 bits d) 128 bits 05. Distance vectorThe link state routing protocol maintains a database that lists all the networks in the internetwork. 39. Identify the purpose of the wildcard mask?A. Router# password-encryptionThe command used to encrypt plaintext passwords is Router (config) # service password-encryption. 1. The Cisco certification will endorse your skills as a Cisco network associate and your skills in networking, switches and routers. A SLIP (serial line internet protocol) transmits serial connections. What technology allows an enterprise to more easily change their cloud provider (e.g. change from Microsoft to AWS)?A. Which Network protocol provides link-state routing?A.NLSPB. At which OSI layer did this happen?A. TransportE. It is also known as one-to-nearest. 31. of collisions will increase, and the no. It supports EAP authentication for connecting to wireless networks. Identify the OSI layer associated with bits?A. What is the default hold time for HSRP?A. Access and Distributionb. a) int fa0/0 b) int vty 0 15 c) int vian 1 d) int s/0/0 02. Uses a single wireB. When the port error is disabled, there will be no receive or sent, and it will be a total shut down. 36. Also, there is a requirement that the value of the Holdtime timer is at least three times the value of the Hello timer. 10. crossover C. Normal operations are continued.B. Experiences a down/down stateC. It can transport TCP/IP. 8. straight throughA medium dependent interface is referred to an Ethernet port connection which connects network devices with other hubs and switches. a) 96 b) 128 c) 48 d) 64 10. You can then administer the stack of switches as one logical unit. 9. OSI Layer 2 connectivity to switches B. The best approach to pass your Cisco 200-301 exam is to challenge and improve your knowledge. b) A debug operation is running. Optimum Switchingc. SAPD. There is no change in the number of the collision.B. There is a decrease in the collision domain.C. An increase in the number of collisions is seen.D. There is no change in the number of broadcast domains.E. The broadcast domains will increase in number.When a hub is replaced with a switch which is configured with Ethernet VLAN, the no. Layer 2 switchC. There is a duplex mismatch.B. The connection is without power for the device.C. The Configuration comes with the shutdown command.E. Port security has disabled the interface.F. The interface is fully functioning On the errdisable status on the Ethernet interface disables the port security. 11. Access and CoreD. Which statement about RADIUS security is true? A. To implement NATThe IPv4 Private IP space is used to enable intra-enterprise communication and to conserve global address space. 15. transportThe RSTP operates at OSI layer 2(data link level). 17. jitterC. Including the router interface, how many hosts can have IP addresses on the LAN attached to the router interface? A receiving host calculates the checksum on a frame and concludes that the frame is damaged and discards. SNAPThe HDLC (High-level data link) is a cluster of rules used for transmitting data between nodes. The packets are created when the layer 3 controls information and adds to the network layer. 23.
